Evaluation and assessment of results

Conférence Européenne
des Directeurs des Routes

Conference of European
Directors of Roads

Best Practice for Cost-Effective Road Safety Infrastructure Investments

Evaluation and assessment of results

Methodology Flow Chart

- 1. ABOUT COST-EFFECTIVENESS ASSESSMENT OF ROAD SAFETY INVESTMENTS**
- 2. REVIEW OF ROAD SAFETY INVESTMENTS**
- 3. SELECTION OF MOST PROMISING ROAD SAFETY INVESTMENTS**
- 4. IN-DEPTH ANALYSIS OF MOST PROMISING ROAD SAFETY INVESTMENTS**
- 5. PROPOSAL OF BEST PRACTICE**

Evaluation and assessment of results

Content

- Roadside treatments (clear zones, safety barriers)
- Speed limits
- Junctions layout (roundabout, realignment, staggering, channelisation)
- Traffic control at junctions (traffic signs, traffic signals)
- Traffic calming schemes

Overview

Main differences
between:

- Cost-benefit analysis,
- cost-effectiveness
- "limited cost-benefit analysis"

Aspect	CBA	CEA	'Limited CBA'
Goal	Determining welfare effects of investments for investment decision	Determining welfare effects of investments for measure selection	Determine costs and benefits ratio
Kind of effects	Multiple quantitative and qualitative effects	Single indicator	Single indicator
Method	Monetizing costs and multiple effects	Costs relating to effect	Monetizing costs and singular effect
Evaluation perspective	Ex ante	Ex post	Ex ante
Source	As many site specific, both costs and effects	Statistical aggregate perceptions of costs and effects of similar measures	As many site specific, both costs and effects
Calculation method	Summon, income less expenses	Quotient, unit cost effect	Summon, income less expenses
Checkpoint	0	Reference value, generally accepted standard for effective measure	Reference value, to be determined (not necessarily a positive balance)
Assessment	Favourable score with positive balance	Favourable score if lower than reference value	Favourable score if higher than reference value
