

Road Safety: Focus on Drink-Driving

25%
of all road deaths
in the EU
are alcohol-related

The relative crash risk compared to sober drivers increases with the increase in blood alcohol content:

at 0.5 g/L
1.4 times

at 1.0 g/L
5 times

at 1.5 g/L
20 times

Possible Countermeasures

- Regulation and police enforcement
- Vehicle technology
- Offering alternative means of transport
- Campaigns, rehabilitation, safety culture
