1 Introduction

In 2019, road crashes in the Member States of the European Union claimed about 22700 lives and left more than 1.2 million people injured. This report presents a wide range of statistical tables containing road safety data from the CARE database for the 27 EU Member States and the four EFTA countries.

The report is divided into four sections. Section 1 contains this introduction and some general notes. Section 2 presents the main road safety trends in the number of crashes leading to death or injury and the absolute and relative development of the number of road fatalities. In this section, changes in the number of seriously injured are also included but should be treated with caution as definitions vary significantly between countries. Section 3 contains detailed data on fatalities by age groups, gender and mode of transport where available. Section 4 provides an insight into time patterns and, light and weather conditions of fatal crashes.

1.1 The CARE Database

CARE is a Community database on road accidents (commonly referred to as “crashes”) resulting in death or injury (there are no statistics on damage-only accidents). The legal basis for CARE is the Council Decision on the creation of a Community database on road accidents (93/704/EC , OJ No L329 of 30.12.1993, pp. 63-65). The Decision obliges Member States to provide annual data on road accidents but does not specify the content. The variables to be collected and disseminated were subsequently discussed and agreed upon by Member States and the Commission. In this regard, a CARE expert group composed of national representatives meets 1-2 times per year to discuss issues related to the database, the variables as well as the collection, processing and dissemination of data. The major difference between CARE and most other existing international databases is the high level of disaggregation, i.e. CARE comprises detailed data on accidents, individuals and vehicles involved in the accident itself, as collected by the Member States. This structure allows for maximum flexibility and potential with regard to analysing the information contained in the system and opens up a whole set of new possibilities in the field of accident analysis. The main purpose is to provide evidence to identify and quantify road safety problems throughout the EU roads, evaluate the efficiency of road safety measures, determine the relevance of EU actions and facilitate the exchange of experience in this field. Member States officials have access to the disaggregated CARE data through a dedicated reporting tool.

National data sets are integrated into the CARE database using their original national structure and definitions, with confidential data blanked out. However, transformation rules are implemented in the CARE database in order to increase data compatibility and thus enhance the functioning of the system.

1.2 Notes

The statistical tables and figures contained in this report provide an overview of road accident data from 2010 to 2019. For some figures, sources other than CARE have been used in order to give a more complete overview of EU road crash data.

In all tables and figures, the European Union refers to the present union of 27 countries. The data in this report result from a number of separate extractions of the CARE/Cadas-database. In case of missing years for some of the countries, the last reported year is shown in some of the tables.

Data in CARE/Cadas are not complete. Countries have their own registration systems that are not always compatible with the way data are recorded in the CARE/Cadas structure. Some countries have not provided data for certain years or are lagging behind. Reported data are sometimes incomplete, implying that some breakdowns of data are not possible or that certain categories are not visible in a breakdown. When, due to a lack of data, a breakdown table was impossible for a specific country, the country was removed from the table. A note below the table gives a list of the omitted countries. If categories are missing for a country, this is indicated in tables with a small dash, in contrast to zero cases which are shown as 0.

Missing data are a problem for the calculation of EU totals. In cases where variables were never reported for a country, the EU total is calculated without that country. In some cases, data are missing for only one or a few years. In these cases, the data are imputed to estimate the contribution of the country to the EU total. Imputed data for a single country are not shown in any of the tables or graphs. Imputation rules are as follows: - in case of data missing between available data for other years: linear interpolation. - in case of missing data in previous years of the time series: copy the value of the first available year in the time series. - in case of missing data for the last year(s) in a time series: copy the values for the last available year. The EU totals were subsequently calculated using the imputed values.

Production chain: Data extractions from the CARE/Cadas database and additional data provided by the European Commission are stored in a local SQL(Structured Query Language) database, keeping track of different versions of the data, converting variable names to concise versions. Data are combined and enriched with metadata in an ETL (Extraction, Transform, Load) scheme. Data are subsequently extracted from this local database using R (studio)¹. Data transformations and imputations are all executed in the R-environment. This report is generated in R Markdown and converted to PDF-format using Knitr². Programming code is maintained in a project-shared GIT-repository³.

2 Overview

2.1 EU trends in the number of crashes, injuries and fatalities

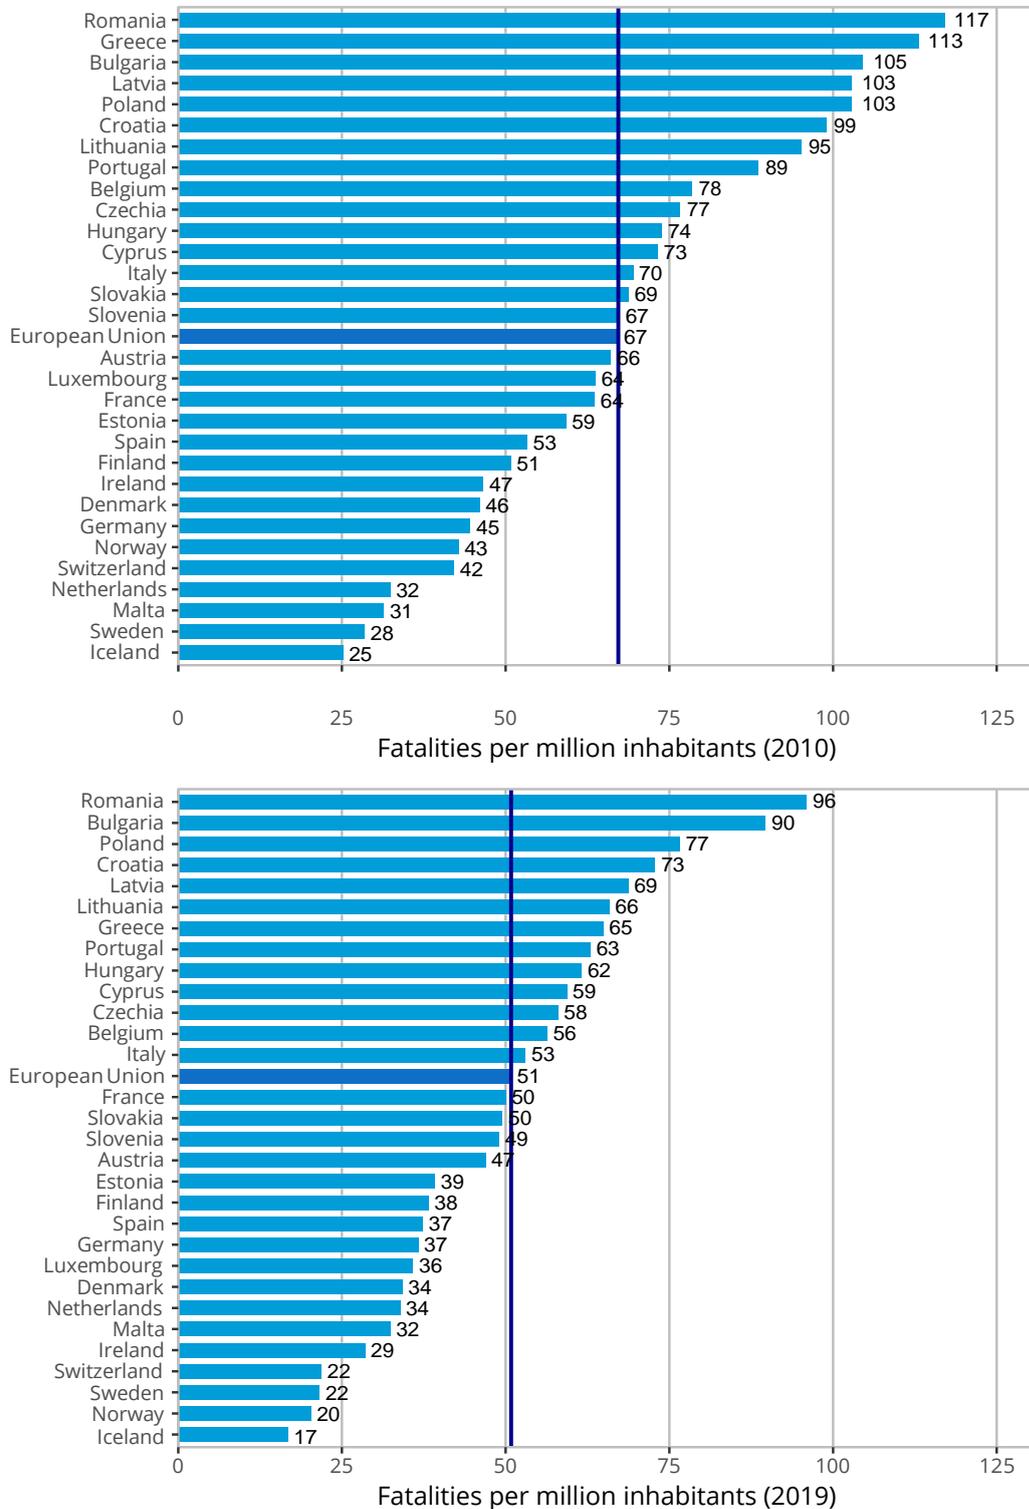

Figure 1. Road crashes, fatalities and injured people in the European Union.

2.2 Trends in individual countries

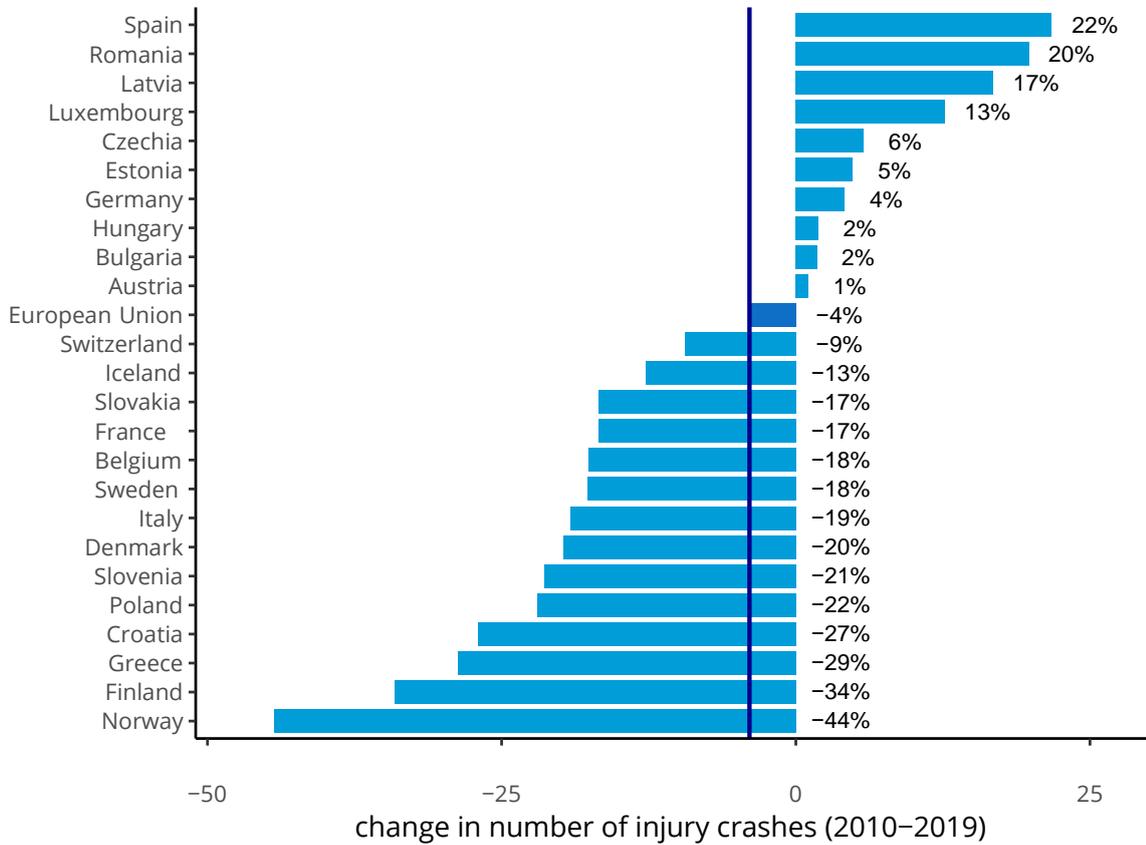

2.2.1 Mortality

Figure 2. Fatalities per million inhabitants in the EU, 2019 compared to 2010.

2.2.2 Trend in the number of crashes leading to injury or death.

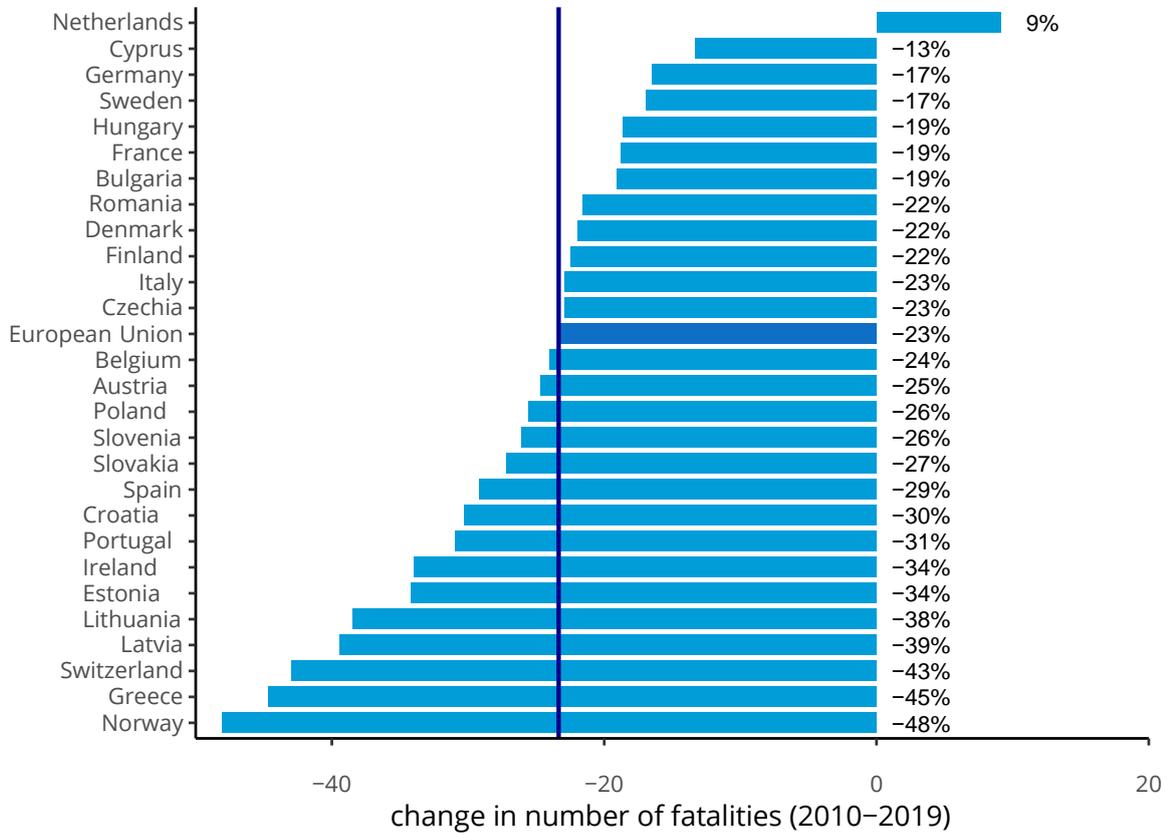

Figure 3. Long-term change in the number of crashes leading to injury or death in the 27 EU countries and 3 EFTA countries (2010-2019), reference year 2010

Ireland, Portugal, Cyprus, Lithuania, Malta missing crash data for one or both of these years. The changes in the number of crashes for Netherlands (77%) were omitted from the graph to ensure readability.

2.2.3 Trend in the number of fatalities

Figure 4. Long-term change in the number of road fatalities in the 27 EU countries and 3 EFTA countries (2010-2019), reference year 2010

Liechtenstein missing fatalities in the referenced years

The change in the number of fatalities for Iceland (-25%), Luxembourg (-31%), Malta (23%) were omitted because the numbers of fatalities are small and subject to annual fluctuations.

Table 1. Annual number of crashes resulting in injuries or death by country 2010-2019.

Missing values were supplemented by the EC.

Ireland - provisional figures for 2018 and 2019
Netherlands - The number of fatalities registered by the police is under-reported and equates to around 85% of the total number of fatalities published nationally. In 2019, the overall total was 661.
Portugal - as of 2018, includes data for Azores and Madeira which account for around 4% of the total

Figure 5. Relative number of fatalities by selected countries⁴ 2010-2019

⁴data, pivot table and graphs for all countries can be found in the Excel workbook accompanying this report.

No data available for Estonia, Italy, Liechtenstein. Limited data available for Lithuania, Finland.

Definitions and registration differ significantly between countries. Trends within a country are usually meaningful unless registration changed during the reporting period (e.g. The Netherlands).

EU totals were not calculated because of missing data for several Member Countries.

Missing data for some countries and years are marked with a dash (-).

3 Fatalities: details

3.1 Fatalities by mode of transport

3.1.1 Pedestrians

Table 5. Annual number of pedestrian fatalities by country 2010-2019

country	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

Switzerland	8	12	36	105	65	101	0	4	3	14	47	44	75	0

Data for Lithuania and Liechtenstein was not available.

For Ireland and Cyprus and Malta and Portugal one of the years had missing data.

EU totals were derived by imputation.

Missing Data are marked with a dash (-).

3.3 Mode of transport by age group

3.3.1 Pedestrians

Table 14. Number of pedestrian fatalities by age group and by country for the last available year

Country	Year	Unknown	<15	15 - 17	18 - 24	25 - 49	50 - 64	65+	Total

Data include taxis

Age distribution is shown for the last year with available data for that country.

EU totals were derived by imputation on available country data.

Missing Data are marked with a dash (-).

Breakdown of other modes of transport was omitted from this section because of low numbers of fatalities for these vehicles.

3.4 Fatalities by gender

3.4.1 Male fatalities

37	Crash conditions: light at the time of the crash (percentage of crashes resulting in fatalities) by country for the last available year.....	46

7 Definitions

The CARE glossary provides short definitions for variables used in the database and in this report.

ACCIDENT / CRASH

Definition: any accident involving at least one road vehicle in motion on a public road or private road to which the public has right of access, resulting in at least one injured or killed person (Source: UNECE/ITF/Eurostat Glossary).

Note: the definition of "injury" varies considerably among EU countries thus affecting the reliability of cross country comparisons.

CRASH AREA TYPE

Definition: the variable indicates the crash area: "Motorway", "Urban Area" and "Rural area". Some manipulation rules are adopted to filter unknown data.

AGE (of person)

Definition: the age (in years and months) of the person is filled in, derived from the date of birth.

BICYCLE/PEDAL CYCLE

Definition: vehicle with at least 2 wheels, without engine. In some cases it can also use electric power.

BUS OR COACH

Definitions Bus: passenger-carrying vehicle, most commonly used for public transport, having more than 16 seats for passengers. Coach: passenger-carrying vehicle, having more than 16 seats for passengers. Most commonly used for interurban movements and touristic trips.

CAR

Definition: motor vehicle with 3 or 4 wheels, mainly used to transport people, seating for no more than 8 occupants. Motor vehicles with these characteristics that are used as taxis as well as motor caravans are also included.

CROSSROAD

Definition: road intersection with four arms. Includes arm sections within 20m distance.

DRIVER

Definition: person driving or riding any motorised vehicle or bicycle. Includes person riding an animal.

FATAL CRASH

Definition: crash with at least one person killed regardless the injury severity of any other persons involved.

FATALITIES

Definition: total number of persons fatally injured; correction factors applied when needed. Death within 30 days of the road crash are included. Confirmed suicides and natural deaths are not included.

FEMALE

Definition: on the basis of identification documents/ personal ID number or determined by the police.

HEAVY GOODS VEHICLE

Definition: includes road tractor, road tractor with semi trailer, lorry over 3,5 tonnes. Motor vehicle with at least four wheels, with a permissible gross vehicle weight of over 3,5 tonnes, used only for the transport of goods. With or without a trailer. Type C driving licence required.

HOUR OF DAY

Definition: period of 60 minutes (24-hour notation) of the crash time.

INJURY SEVERITY

Definition: indicates to what extent a person (driver, passenger or pedestrian) was injured or not during a road crash. The CARE database contains data based on national definitions of 'serious injury' and is often subject to the judgement of the police records. The recommended definition is where the person required 24 hours hospitalisation. Values: Fatally injured, Seriously injured, Slightly injured, Not injured, Unknown.

JUNCTION TYPE

Definition: if the crash occurred at a junction, this variable indicates whether the crash occurred at an at-grade junction or at an interchange and the type of junction / interchange. Values: Not at junction, At-grade - crossroad, At-grade - roundabout, At-grade - T or staggered junction, At-grade - multiple junction, Not at grade (interchange), Other, At level crossing, Unknown, At a junction-Not specified.

LORRY, LESS THAN 3,5 TONNES

Definition: goods vehicle under 3,5t maximum gross weight. Smaller motor vehicle used only for the transport of goods.

MALE

Definition: on the basis of identification documents/ personal ID number or determined by the police.

MONTH

Definition: calendar month of the crash date.

MOPED

Definition: two or three wheeled vehicle equipped with internal combustion engine, with size less than 50 cc and maximum speed that does not exceed 45 km/h. The minimum age at which a road user can drive a moped differs between countries.

MOTORCYCLE

Definition: motor vehicle with two or three wheels, with an engine size of more than 50 cc. With a trailer possible. With a sidecar possible. Type A driving license required.

MOTORWAY

Definition: public road with dual carriageways, and at least two lanes each way. Entrance and exit signposted. Road with grade separated interchanges. Road with a central barrier or central reservation. No crossing permitted. No stopping permitted unless in an emergency. Entry prohibited for pedestrians, animals, bicycles, mopeds, agricultural vehicles.

NOT AT JUNCTION

Definition: the crash has not occurred at a junction (or it has occurred at a distance greater than 20m from a junction).

PASSENGER

Definition: person on or in a vehicle, who is not the driver. Includes person in the act of boarding or alighting from a vehicle.

PEDESTRIAN

Definition: person on foot; person pushing or holding bicycle, person who uses a wheelchair, a pram or a pushchair, leading or herding an animal, riding a toy cycle on the footway, person on roller skates, skateboard or skis. Does not include persons in the act of boarding or alighting from a vehicle.

ROAD USER TYPE

Definition: classifies the person involved in a road crash. Values: Driver, Passenger, Pedestrian, Unknown

ROUNDAABOUT

Definition: circular road. Includes sections leading to it, within 20-meter distance.

SERIOUSLY INJURED

Definition: total number of seriously injured persons corrected by correction factors when needed. Injured (although not killed) in the road crash and, in principle, hospitalised at least 24 hours within 30 days from the crash. The Commission is also working with Member States to collect data using the MAIS3+ classification which takes account of the severity of the injured person. See <https://www.safetycube-project.eu/wp-content/uploads/SafetyCube-D7.1-Leaflet.pdf>

TRAFFIC UNIT TYPE

Definition: indicates the type of traffic unit involved in the crash. Important to assess the variations in road crash risk for the various traffic unit types.

TRANSPORT MODE - TRANSPORT UNIT TYPE GROUP

Definition: grouping traffic unit types. These groups are mainly used in this report. values: agricultural tractor, bus or coach, car, heavy goods vehicle, lorry under 3.5 tonnes, moped, motorcycle, bicycle, pedestrian, other, unknown.

WEEKDAY - date of crash

Definition: 24-hour day within 7-day week. Note: data calculated by the CARE system from the date of crash, where data are not available in national files.
